

ANTEC VIRKON S

BROAD SPECTRUM DISINFECTANT

USAGE IN PETS

Living spaces

Indoor cleaning

Pet equipment and toys

Vet clinics

USAGE DOSE & APPLICATION

VIRKON S is a MULTI PURPOSE DISINFECTANT

- **Living spaces, houses, pet equipment and toys;** Disinfectant solution is prepared by adding VIRKON S (powder) to 5 g (1 heaped scale spoon*) in 1 liter of water and the internal or external surfaces are disinfected with this prepared solution. Application can be done by washing, wiping or spraying. Toys and equipment can be disinfected in a bucket.
- **Veterinary clinics, surgery tables;** Disinfectant solution is prepared by adding 10 g (2 heaped scale spoons*) VIRKON S to 1 liter of water and disinfected after each examination with this prepared solution. Application can be done by washing, wiping or spraying. Surgical instruments and equipment are disinfected after waiting for 10 minutes in the prepared solution after the pre-cleaning, and rinsed with water.
- **Aerial disinfection;** In order to prevent diseases that are transmitted by airborne contamination to humans and animals, 1/200 (5 g VIRKON S to 1lt of water) solution is prepared for disinfection of the air in the current environment and 1 lt solution is used per 100 m³ area.
- Viole pink color of the prepared solution is an indicator. When the color turned on, it is recommended to prepare fresh solution to use for a few days for high efficiency since its effectiveness will decrease.
- Your metal items other than stainless steel must be allowed to stand or soak in VIRKON S solution for 10 minutes then rinse with water or wipe.
- Disinfection should be repeated after every possible contamination.

For other areas of use and dilution rates, you can visit VIRKON S virucidal, bacterial and fungicidal activity pages of our website www.refarm.com.tr

* The scale spoon is in a 50g box. 1 measuring spoon is 5 g and 1 normal sized dessert spoon can be used.
